

Five TOTO Products, Including “WASHLET Integrated toilet”, Receive GREEN GOOD DESIGN AWARD 2026

TOTO LTD. (Headquartered in Fukuoka Prefecture, Japan; President: Shinya Tamura) has received the "GREEN GOOD DESIGN AWARD 2026," a global award given to products with excellent environmentally conscious design and advanced technology. Five of its products—the one-piece toilet "AURORA," "NEOREST LS W/AS W" which is WASHLET*1 integrated toilet with stool scanning*1 function, the eco-remote control, and two types of showers (the G selection shower's overhead shower and multi-functional hand shower)—have been awarded.

The Green Good Design Awards are an international environment award with the goal of enhancing people's environmental awareness globally by evaluating excellent environmentally friendly designs that contribute to the realization of a sustainable society. The special judges evaluate and present awards to governments, companies, organizations, individuals such as architects and designers, individual products, examples of architecture, and technology. This award recognizes TOTO's cutting-edge, environmentally conscious technology, its creation of new value in wellness and comfort, and its sincere commitment to manufacturing. This is the seventh time TOTO has received this award, bringing the total number of products to 13.

TOTO will continue to strive to achieve both "the realization of cleanliness, comfort, and wellness" and "contribution to society and the global environment" by globally disseminating TOTO products that fuse design and technology.

G selection shower – Multifunctional hand shower with temporary water shut-off function

About "GREEN GOOD AWARDS"

The parent organization, Good Design Awards, has a long history in the design industry, established by Eero Saarinen, Charles and Ray Eames, and Edgar Kaufmann, Jr., in Chicago in 1950. The Green Good Design Awards are prestigious world-class awards recognized alongside the iF Design Award (since 1953) and Red Dot Design Award (since 1955).

The Green Good Design Awards began contributing to the development of sustainable design in 2009. Its goal is to enhance people's awareness of the environment globally by evaluating environmentally friendly and excellent designs. It is organized by the Chicago Athenaeum: Architecture and Design Museum (U.S.A.) and the European Centre for Architecture Art Design and Urban Studies (Ireland).

The Features of Award-winning Products

"AURORA" one-piece toilet

"AURORA" one-piece toilet, with its sophisticated design based on elegant flared curves, is equipped with a new flushing method called the "INTEGRALITY SYSTEM." It features two water channels: one for bowl flushing and another for waste discharge (jet-flushing), controlling the timing of each flush using water pressure. By increasing the amount of water used for bowl flushing compared to conventional models and performing bowl flushing first, the bowl flushing time has been extended by approximately five times. Furthermore, the synergistic effect with the staggered jet-flushing time allows for water conservation at 1 gallon (3.8 liters) while simultaneously improving bowl surface cleaning performance and waste discharge performance. In addition, the full-skirt design, which eliminates protrusions on the sides of the toilet bowl, makes it easy to clean and aesthetically pleasing. These design features and innovative technologies have been highly praised as an environmentally conscious product.

"NEOREST LS-W/AS-W" WASHLET integrated toilet with stool scanning function

This is a groundbreaking toilet with WASHLET, equipped with TOTO's sensing technology, "Stool Scan." Simply using the toilet as usual automatically records the daily condition of your stool (shape, color, and quantity) in the compatible app, "TOTO Wellness." Based on this data, it suggests lifestyle-enhancing advice, such as how to eat and recommended exercises. Through this new user experience (UX), it supports healthy habits that can be easily and naturally maintained. (Daily Wellness) In recent years, with growing interest in extending healthy life expectancy and preventing lifestyle-related diseases, this product has been highly praised not only for its user-friendly technologies but also for its high water-saving (environmental) performance with a flushing water volume of 3.8L, making it a sustainable design that considers both people and the planet.

Eco Remote Control

This is a groundbreaking remote control featuring a technology that allows it to generate its own power by pressing a button. This mechanism not only conserves water during toilet flushing but also conserves resources (no battery replacement or power wiring required). Furthermore, its unique "thinning technology" has resulted in a significant size reduction from the conventional 25mm thickness to 11.5mm. To ensure intuitive use even in facilities used by a large number of people, the remote control features a large, round button for toilet flushing and enlarged pictograms, improving both usability (operability and visibility) and a design that harmonizes beautifully with the surrounding space. Its high-level integration of environmental considerations and universal design has earned it high praise as a product that contributes to a sustainable society.

G selection shower - Overhead Shower

This shower, based on the concept of "Human Approach" (people-centered design), features an organic and gentle form that welcomes people. It is equipped with a new water discharge technology called "CALMING SHAWL," which effectively positions unique water discharge nozzles, gently enveloping the neck and shoulders in plenty of warm water, as if wearing a shawl. Thanks to this innovative technology, it has achieved excellent "water saving performance" of less than 9L/min, which is the international water saving standard*², while also brilliantly achieving a "plenty of showering comfort." With its beautiful design that conforms to the body, it has been highly praised as a product that provides daily relaxation and the comfort of "warming the body in a relaxed posture," and contributes to a sustainable society.

G selection shower - Multifunctional hand shower with temporary water shut-off function

This hand shower shares the same design concept as the overhead shower and features "technology that achieves a compact size while simultaneously offering four multi-functional water discharge modes and a temporary water stop function." Equipped with four modes to choose from depending on your mood, including "MIST SPA," it achieves an extremely high water-saving effect of approximately 48% compared to the conventional products,*³ thanks to the combination of a temporary water stop function and "Comfort Wave," which discharges large water droplets in a swinging motion.

Furthermore, by placing the temporary water stop button next to the mode switching button, switching shower modes and stopping the water flow can be easily done with "one finger." The adoption of a unique compact mechanism results in light button operation force, achieving both "high operability" and a "beautiful design" that conforms to the body. This excellent design, which contributes to nature and environmental conservation, has been highly praised.

*2: International water conservation standards: GB28378-2019, WELS: Water Efficiency Labelling Scheme(2021.9)

*3: Conventional product: Thermostatic faucet and shower head (optimal flow rate 10L/min)
